

## Step-1

Let  $U$  be a complex matrix.

A complex matrix  $U$  is unitary if  $UU^* = I$ ,

Where  $U^*$  is transpose of complex conjugate of  $U$ .

Clearly it can be written as  $U\bar{U}^T = I$

Take the determinant on both sides then,

$$|U\bar{U}^T| = |I|$$

But  $|U\bar{U}^T| = |\bar{U}^T| |U|$

Thus,  $|U\bar{U}^T| = |I|$  can be written as,

$$|\bar{U}^T| |U| = 1$$

$$\det(\bar{U}) \det U = 1 \quad \text{Since } U \text{ is a unitary matrix that is } |\bar{U}^T| = |\bar{U}|$$

## Step-2

By known condition, the determinant of conjugate of the matrix is equal to conjugate of determinant of that matrix.

That is,

$$\det \bar{U} = \overline{\det(U)}$$

Thus,

$$\det(\bar{U}) \det U = 1$$

$$\overline{\det(U)} \det U = 1$$

$$|\det U|^2 = 1 \quad \text{Since } \overline{\det(U)} \det(U) = |\det U|^2$$

$$\boxed{|\det U| = 1}$$

### Step-3

Suppose  $U = \begin{bmatrix} 1 & 0 \\ 0 & i \end{bmatrix}$

Then  $U^H = \text{transpose of conjugate matrix of } U$

$$U^H = \begin{bmatrix} 1 & 0 \\ 0 & -i \end{bmatrix}$$

So  $\det U = i$  and  $\det U^H = -i$

Therefore, clearly  $\det U \neq \det U^H$ .

### Step-4

Suppose  $U = \begin{bmatrix} r_1 e^{i\theta_1} & r_3 e^{i\theta_3} \\ r_2 e^{i\theta_2} & r_4 e^{i\theta_4} \end{bmatrix}$  is unitary.

Then  $U$  has orthonormal columns,

So  $r_1^2 + r_2^2 = 1$  and  $r_3^2 + r_4^2 = 1$ .

Let  $r_1 = \sin \theta_1$  then  $r_2 = \cos \theta_1$ , and if  $r_3 = \cos \theta_2$  then  $r_4 = \sin \theta_2$

Where  $0 \leq \theta_1, \theta_2 \leq \frac{\pi}{2}$ .

By orthogonality of the column vectors,

$$\sin \theta_1 \cos \theta_2 e^{i(\theta_1 + \theta_2)} + \cos \theta_1 \sin \theta_2 e^{i(\theta_2 + \theta_1)} = 0.$$

This implies that  $\theta_2 = \theta_1$  and  $e^{\theta_1 + \theta_3} = -e^{\theta_2 + \theta_4}$

$$\theta_1 + \theta_3 = \theta_2 + \theta_4 + \pi.$$

So,

$$U = \begin{bmatrix} \sin \theta e^{i\theta_1} & \cos \theta e^{i\theta_3} \\ \cos \theta e^{i\theta_2} & \sin \theta e^{i(\theta_1 + \theta_3 - \theta_2 - \pi)} \end{bmatrix} \text{ for some } 0 \leq \theta \leq \frac{\pi}{2}.$$
