

Step-1

Consider F_n be the determinant of the 1, 1,-1 tridiagonal matrix (n by n):

$$F_n = \det \begin{vmatrix} 1 & -1 & & \\ 1 & 1 & -1 & \\ & 1 & 1 & -1 \\ & & \ddots & \ddots & \ddots \\ & & & 1 & 1 \end{vmatrix}$$

If $n = 1$,

$$\begin{aligned} F_1 &= \det[1] \\ &= 1 \end{aligned}$$

Step-2

If $n = 2$,

$$\begin{aligned} F_2 &= \det \begin{bmatrix} 1 & -1 \\ 1 & 1 \end{bmatrix} \\ &= 1 + 1 \\ &= 2 \end{aligned}$$

Step-3

If $n = 3$,

$$\begin{aligned} F_3 &= \det \begin{bmatrix} 1 & -1 & 0 \\ 1 & 1 & -1 \\ 0 & 1 & 1 \end{bmatrix} \\ &= \det \begin{bmatrix} 1 & -1 \\ 1 & 1 \end{bmatrix} + \det \begin{bmatrix} 1 & -1 \\ 0 & 1 \end{bmatrix} \end{aligned}$$

$$= F_2 + \det[1] \text{ Expanding 2nd determinant by 1st column}$$

$$= F_2 + F_1$$

$$= 2 + 1$$

$$= 3$$

Step-4

If $n = 4$,

$$F_4 = \det \begin{bmatrix} 1 & -1 & 0 & 0 \\ 1 & 1 & -1 & 0 \\ 0 & 1 & 1 & -1 \\ 0 & 0 & 1 & 1 \end{bmatrix}$$

$$= \det \begin{bmatrix} 1 & -1 & 0 \\ 1 & 1 & -1 \\ 0 & 1 & 1 \end{bmatrix} + \det \begin{bmatrix} 1 & -1 & 0 \\ 0 & 1 & -1 \\ 0 & 1 & 1 \end{bmatrix}$$

$$= F_3 + \det \begin{bmatrix} 1 & -1 \\ 1 & 1 \end{bmatrix} \text{ Expanding 2nd determinant by 1st column}$$

$$= F_3 + F_2$$

$$= 3 + 2$$

$$= 5$$

$$\neq 4$$

Step-5

The 1, 1 cofactor of the n by n matrix is F_{n-1} .

The 1, 2 cofactor has a 1 in column 1, with cofactor F_{n-2} .

Multiply by $(-1)^{1+2}$ and also (-1) from the 1, 2 entry to find $F_n = F_{n-1} + F_{n-2}$.

So, these determinants are Fibonacci numbers.
