

Step-1

(x, y, z) is a linear combination of $(2, 3, 1), (1, 2, 3)$ so that the vectors $(x, y, z), (2, 3, 1), (1, 2, 3)$ are linearly dependent and hence we get

$$\begin{vmatrix} x & y & z \\ 2 & 3 & 1 \\ 1 & 2 & 3 \end{vmatrix} = 0$$

Step-2

Equation of the plane is

$$\begin{aligned} x(9-2) - y(6-1) + z(4-3) &= 0 \\ \Rightarrow 7x - 5y + z &= 0 \end{aligned}$$

All linear combinations (x, y, z) of $(2, 3, 1), (1, 2, 3)$ satisfy the equation $\boxed{7x - 5y + z = 0}$
