

Step-1

Consider the following matrix:

$$A = \begin{pmatrix} s & -4 & -4 \\ -4 & s & -4 \\ -4 & -4 & s \end{pmatrix}$$

The objective is to find the values of s for which the matrix A is positive definite (or) all eigenvalues of A are $\lambda > 0$.

Step-2

The determinant of the matrix A is,

$$\begin{aligned} \det A &= \det \begin{pmatrix} s & -4 & -4 \\ -4 & s & -4 \\ -4 & -4 & s \end{pmatrix} \\ &= s(s^2 - 16) + 4(-4s - 16) - 4(16 + 4s) \\ &= s^3 - 48s - 128 \\ &= (s - 8)(s + 4)^2 \end{aligned}$$

Step-3

The matrix A is positive definite if

$$\begin{aligned} \det A &> 0 \\ (s - 8)(s + 4)^2 &> 0 \\ s - 8 &> 0 \quad \left(\text{Since } (s + 4)^2 \geq 0 \text{ for all } s \right) \\ s &> 8 \end{aligned}$$

Therefore, the matrix A is positive definite for $\boxed{s > 8}$.

Step-4

Consider the following matrix:

$$B = \begin{pmatrix} t & 3 & 0 \\ 3 & t & 4 \\ 0 & 4 & t \end{pmatrix}$$

The objective is to find the values of t for which the matrix B is positive definite (or) all eigenvalues of B are $\lambda > 0$.

The determinant of the matrix B is,

$$\begin{aligned}\det B &= \det \begin{pmatrix} t & 3 & 0 \\ 3 & t & 4 \\ 0 & 4 & t \end{pmatrix} \\ &= t(t^2 - 16) - 3(3t) + 0 \\ &= t^3 - 25t \\ &= t(t^2 - 25)\end{aligned}$$

Step-5

The matrix B is positive definite if

$$\begin{aligned}\det B &> 0 \\ t(t^2 - 25) &> 0 \\ t > 0, t^2 - 25 > 0 \quad (\text{or}) \quad t < 0, t^2 - 25 < 0 \\ t > 0, (t-5)(t+5) > 0 \quad (\text{or}) \quad t < 0, (t-5)(t+5) < 0 \\ t > 0, t \in (-\infty, -5) \cup (5, \infty) \quad (\text{or}) \quad t < 0, t \in (-5, 5) \\ t \in (5, \infty) \quad (\text{or}) \quad t \in (-5, 0)\end{aligned}$$

Therefore, the matrix B is positive definite for $\boxed{t \in (-5, 0) \quad (\text{or}) \quad t \in (5, \infty)}$.
