

## Step-1

Consider the following matrices.

$$A = \begin{bmatrix} 1 & 2 & 0 & 1 \\ 0 & 1 & 1 & 0 \\ 1 & 2 & 0 & 1 \end{bmatrix}, \text{ and } B = \begin{bmatrix} 1 & 2 & 3 \\ 4 & 5 & 6 \\ 7 & 8 & 9 \end{bmatrix}$$

The objective is to reduce the matrices  $A$  and  $B$  to echelon form, to find their ranks and also find the free variables. Find the special solutions to  $Ax = 0$ ,  $Bx = 0$  and also find all solutions.

## Step-2

Consider the matrix,

$$A = \begin{bmatrix} 1 & 2 & 0 & 1 \\ 0 & 1 & 1 & 0 \\ 1 & 2 & 0 & 1 \end{bmatrix}$$

$$x = \begin{bmatrix} u \\ v \\ w \\ y \end{bmatrix}, b = \begin{bmatrix} b_1 \\ b_2 \\ b_3 \end{bmatrix}$$

Let

The augmented matrix is,

$$[A \ b] = \begin{bmatrix} 1 & 2 & 0 & 1 & b_1 \\ 0 & 1 & 1 & 0 & b_2 \\ 1 & 2 & 0 & 1 & b_3 \end{bmatrix}$$

$$\xrightarrow{R_3 - R_1} \begin{bmatrix} 1 & 2 & 0 & 1 & b_1 \\ 0 & 1 & 1 & 0 & b_2 \\ 0 & 0 & 0 & 0 & b_3 - b_1 \end{bmatrix}$$

$$\xrightarrow{R_1 - 2R_2} \begin{bmatrix} 1 & 0 & -2 & 1 & b_1 - 2b_2 \\ 0 & 1 & 1 & 0 & b_2 \\ 0 & 0 & 0 & 0 & b_3 - b_1 \end{bmatrix} \quad (1)$$

## Step-3

The last equation shows the solvability condition as  $b_3 - b_1 = 0$

The matrix  $[A, b]$  is converted as  $[R, d]$

The rank of  $A$  is 2 because there are two pivot columns, the first, second columns are pivot columns.

Pivot variables are  $u$ ,  $v$ , and the free variables are  $w$ ,  $y$ .

## Step-4

Now find special solutions to  $Ax = 0$ .

Consider,  $Ax = 0$

From matrix (1),

$$\begin{bmatrix} 1 & 0 & -2 & 1 \\ 0 & 1 & 1 & 0 \\ 0 & 0 & 0 & 0 \end{bmatrix} \begin{bmatrix} u \\ v \\ w \\ y \end{bmatrix} = \begin{bmatrix} 0 \\ 0 \\ 0 \end{bmatrix}$$

$$u - 2w + y = 0$$

$$v + w = 0$$

So,

$$u = 2w - y$$

$$v = -w$$

## Step-5

Therefore,

$$\begin{aligned} \begin{bmatrix} u \\ v \\ w \\ y \end{bmatrix} &= \begin{bmatrix} 2w - y \\ -w \\ w \\ y \end{bmatrix} \\ &= w \begin{bmatrix} 2 \\ -1 \\ 1 \\ 0 \end{bmatrix} + y \begin{bmatrix} -1 \\ 0 \\ 0 \\ 1 \end{bmatrix} \end{aligned}$$

$$\left[ \begin{array}{c} 2 \\ -1 \\ 1 \\ 0 \end{array} \right], \left[ \begin{array}{c} -1 \\ 0 \\ 0 \\ 1 \end{array} \right].$$

Therefore, the special solutions are,

## Step-6

Now,  $Ax = b$  is solvable if  $b_1 = b_3$ .

$$\text{Let } \begin{bmatrix} b_1 \\ b_2 \\ b_3 \end{bmatrix} = \begin{bmatrix} 1 \\ 2 \\ 1 \end{bmatrix}$$

$$\text{For } Ax = \begin{bmatrix} 1 \\ 2 \\ 1 \end{bmatrix},$$

Consider the matrix,  $Ax = b$ .

$$\begin{bmatrix} 1 & 2 & 0 & 1 \\ 0 & 1 & 1 & 0 \\ 1 & 2 & 0 & 1 \end{bmatrix} \begin{bmatrix} u \\ v \\ w \\ y \end{bmatrix} = \begin{bmatrix} 1 \\ 2 \\ 1 \end{bmatrix}$$

$$\xrightarrow{R_3 - R_1} \begin{bmatrix} 1 & 2 & 0 & 1 \\ 0 & 1 & 1 & 0 \\ 0 & 0 & 0 & 0 \end{bmatrix} \begin{bmatrix} u \\ v \\ w \\ y \end{bmatrix} = \begin{bmatrix} 1 \\ 2 \\ 0 \end{bmatrix}$$

$$\xrightarrow{R_1 - 2R_2} \begin{bmatrix} 1 & 0 & -2 & 1 \\ 0 & 1 & 1 & 0 \\ 0 & 0 & 0 & 0 \end{bmatrix} \begin{bmatrix} u \\ v \\ w \\ y \end{bmatrix} = \begin{bmatrix} -3 \\ 2 \\ 0 \end{bmatrix}$$

$$\begin{aligned} u - 2w + y &= -3 \\ v + w &= 2 \end{aligned}$$

$$\begin{aligned} u &= -3 + 2w - y \\ v &= 2 - w \end{aligned}$$

## Step-7

Now

$$\begin{bmatrix} u \\ v \\ w \\ y \end{bmatrix} = \begin{bmatrix} -3+2w-y \\ 2-w \\ w \\ y \end{bmatrix}$$

$$= \begin{bmatrix} -3 \\ 2 \\ 0 \\ 0 \end{bmatrix} + w \begin{bmatrix} 2 \\ -1 \\ 1 \\ 0 \end{bmatrix} + y \begin{bmatrix} -1 \\ 0 \\ 0 \\ 1 \end{bmatrix}$$

## Step-8

Therefore, the particular solution is,

$$x_p = \begin{bmatrix} -3 \\ 2 \\ 0 \\ 0 \end{bmatrix}$$

Hence, all solutions of  $Ax = b$  are  $x = x_p + x_n$

$$x = \begin{bmatrix} -3 \\ 2 \\ 0 \\ 0 \end{bmatrix} + w \begin{bmatrix} 2 \\ -1 \\ 1 \\ 0 \end{bmatrix} + y \begin{bmatrix} -1 \\ 0 \\ 0 \\ 1 \end{bmatrix}$$

Therefore

## Step-9

Consider the matrix,

$$B = \begin{bmatrix} 1 & 2 & 3 \\ 4 & 5 & 6 \\ 7 & 8 & 9 \end{bmatrix}$$

$$x = \begin{bmatrix} u \\ v \\ w \end{bmatrix}, b = \begin{bmatrix} b_1 \\ b_2 \\ b_3 \end{bmatrix}$$

Let

The augmented matrix is,

$$[B \ b] = \begin{bmatrix} 1 & 2 & 3 & b_1 \\ 4 & 5 & 6 & b_2 \\ 7 & 8 & 9 & b_3 \end{bmatrix}$$

## Step-10

Simplify, by using row operations

$$\begin{array}{l} R_2 - 4R_1, \\ R_3 - 7R_1 \end{array} \begin{bmatrix} 1 & 2 & 3 & b_1 \\ 0 & -3 & -6 & (b_2 - 4b_1) \\ 0 & -6 & -12 & (b_3 - 7b_1) \end{bmatrix}$$

$$\xrightarrow{R_3 - 2R_2} \begin{bmatrix} 1 & 2 & 3 & b_1 \\ 0 & -3 & -6 & (b_2 - 4b_1) \\ 0 & 0 & 0 & b_3 + b_1 - 2b_2 \end{bmatrix} \quad (2)$$

The system  $Bx = b$  is solvable if  $b_1 - 2b_2 + b_3 = 0$

The rank of  $B$  is two, since there are two pivot columns. First, second columns are pivot columns,  $u$ ,  $v$  are pivot variables and  $w$  is a free variable.

## Step-11

Now find special solutions to  $Bx = 0$

Consider,  $Bx = 0$ .

From the matrix (2),

$$\begin{bmatrix} 1 & 2 & 3 \\ 0 & -3 & -6 \\ 0 & 0 & 0 \end{bmatrix} \begin{bmatrix} u \\ v \\ w \end{bmatrix} = \begin{bmatrix} 0 \\ 0 \\ 0 \end{bmatrix}$$

$$u + 2v + 3w = 0$$

$$3v + 6w = 0$$

So,

$$u = -2v - 3w$$

$$3v = -6w$$

$$v = -2w$$

Now substitute  $v = -2w$  in  $u = -2v - 3w$

$$\begin{aligned}
 u &= -2(-2w) - 3w \quad (\text{Since } v = -2w) \\
 &= 4w - 3w \\
 &= w
 \end{aligned}$$

Therefore,

$$v = -2w$$

$$u = w$$

$$\begin{aligned}
 \begin{bmatrix} u \\ v \\ w \end{bmatrix} &= \begin{bmatrix} w \\ -2w \\ w \end{bmatrix} \\
 &= w \begin{bmatrix} 1 \\ -2 \\ 1 \end{bmatrix}
 \end{aligned}$$

$$x_n = w \begin{bmatrix} 1 \\ -2 \\ 1 \end{bmatrix}$$

Hence,

## Step-12

To find particular solution, take

$$b = \begin{bmatrix} b_1 \\ b_2 \\ b_3 \end{bmatrix} = \begin{bmatrix} 1 \\ 1 \\ 1 \end{bmatrix} \quad (\text{Since } b_1 - 2b_2 + b_3 = 0)$$

Now consider  $Bx = b$ ,

$$\begin{bmatrix} 1 & 2 & 3 \\ 4 & 5 & 6 \\ 7 & 8 & 9 \end{bmatrix} \begin{bmatrix} u \\ v \\ w \end{bmatrix} = \begin{bmatrix} 1 \\ 1 \\ 1 \end{bmatrix}$$

$$\begin{array}{l} R_2 - 4R_1, \\ \underline{R_3 - 7R_1} \end{array} \begin{bmatrix} 1 & 2 & 3 \\ 0 & -3 & -6 \\ 0 & -6 & -12 \end{bmatrix} \begin{bmatrix} u \\ v \\ w \end{bmatrix} = \begin{bmatrix} 1 \\ -3 \\ -6 \end{bmatrix}$$

$$\underline{R_3 - 2R_2} \begin{bmatrix} 1 & 2 & 3 \\ 0 & -3 & -6 \\ 0 & 0 & 0 \end{bmatrix} \begin{bmatrix} u \\ v \\ w \end{bmatrix} = \begin{bmatrix} 1 \\ -3 \\ 0 \end{bmatrix}$$

$$u + 2v + 3w = 1$$

$$-3v - 6w = -3$$

From the second equation,

$$-3v - 6w = -3$$

$$-3v = -3 + 6w$$

$$v = \frac{3 - 6w}{3}$$

$$v = 1 - 2w$$

Substitute,  $v = 1 - 2w$  in  $u + 2v + 3w = 1$

$$u + 2(1 - 2w) + 3w = 1$$

$$u + 2 - 4w + 3w = 1$$

$$u - w = 1 - 2$$

$$u - w = -1$$

$$u = w - 1$$

## Step-13

The particular solution is,

$$\begin{bmatrix} u \\ v \\ w \end{bmatrix} = \begin{bmatrix} w - 1 \\ 1 - 2w \\ w \end{bmatrix}$$

$$= \begin{bmatrix} -1 \\ 1 \\ 0 \end{bmatrix} + w \begin{bmatrix} 1 \\ -2 \\ 1 \end{bmatrix}$$

$$x_p = \begin{bmatrix} -1 \\ 1 \\ 0 \end{bmatrix}$$

All solutions for  $BX = b$  are  $x = x_n + x_p$ .

Hence, the complete solutions is,

$$x = \begin{bmatrix} -1 \\ 1 \\ 0 \end{bmatrix} + w \begin{bmatrix} 1 \\ -2 \\ 1 \end{bmatrix}.$$
