

## Step-1

Suppose  $v_1, v_2, v_3$  are the eigenvectors for  $T$ .

Then  $T(v_i) = \lambda_i v_i$  for  $i = 1, 2, 3$

We have to find the matrix for  $T$  when the input and output bases are the  $v_i$ 's.

## Step-2

Since  $T(v_i) = \lambda_i v_i$  for  $i = 1, 2, 3$

So we can write

$$\begin{aligned} T(v_1) &= \lambda_1 v_1 \\ &= \lambda_1 v_1 + 0v_2 + 0v_3 \end{aligned}$$

$$\begin{aligned} T(v_2) &= \lambda_2 v_2 \\ &= 0v_1 + \lambda_2 v_2 + 0v_3 \end{aligned}$$

$$\begin{aligned} T(v_3) &= \lambda_3 v_3 \\ &= 0v_1 + 0v_2 + \lambda_3 v_3 \end{aligned}$$

Therefore, the matrix of linear transformation  $T$  when the input and output basis is  $\{v_1, v_2, v_3\}$  is  $\begin{bmatrix} \lambda_1 & 0 & 0 \\ 0 & \lambda_2 & 0 \\ 0 & 0 & \lambda_3 \end{bmatrix}$ .
