

Step-1

Given that $A = \begin{bmatrix} 1 & 2 \\ 3 & 4 \end{bmatrix}$ and M is any 2 by 2 matrix.

And the linear transformation T is defined as $T(M) = AM$.

We have to verify what rules of matrix multiplication show that T is linear.

Step-2

Let M, N be any 2 by 2 matrices.

Now

$$\begin{aligned} T(M + N) &= A(M + N) \\ &= AM + AN \\ &= T(M) + T(N) \end{aligned}$$

Step-3

Let c be any scalar.

Now

$$\begin{aligned} T(cM) &= A(cM) \\ &= c(AM) \end{aligned}$$

For $A(M + N) = AM + AN$, Distributive law among matrices,

For $A(cM) = c(AM)$, this is one type of associate law, and commutative law and constant multiplication of matrix.
