

## Step-1

Since  $a_2 - ka_1$  is orthogonal to  $a_1$ , their dot product (that is, inner product) must be zero. Consider the following:

$$\begin{aligned}(a_2 - ka_1) \cdot a_1 &= 0 \\ a_2 \cdot a_1 - ka_1 \cdot a_1 &= 0 \\ k &= \frac{a_2 \cdot a_1}{a_1 \cdot a_1}\end{aligned}$$

This can also be written as  $k = \frac{a_2^\top a_1}{a_1^\top a_1}$ .

Therefore,  $a_2 - \frac{a_2^\top a_1}{a_1^\top a_1} a_1$  is orthogonal to  $a_1$ .
