

Step-1

Given that the matrix is $C = \begin{pmatrix} 3 & 0 \\ 1 & 2 \end{pmatrix}$,

We need to find the matrix A .

We can determine A by using Cholesky factorization. i.e. $A = CC^T$.

So,

$$\begin{aligned} A &= \begin{pmatrix} 3 & 0 \\ 1 & 2 \end{pmatrix} \begin{pmatrix} 3 & 1 \\ 0 & 2 \end{pmatrix} \\ &= \begin{pmatrix} 9 & 3 \\ 3 & 5 \end{pmatrix} \end{aligned}$$

Therefore, the matrix $A = \begin{pmatrix} 9 & 3 \\ 3 & 5 \end{pmatrix}$.

Step-2

Given that $A = \begin{pmatrix} 4 & 8 \\ 8 & 25 \end{pmatrix}$,

We need to find C .

We know that if $A = \begin{pmatrix} a & b \\ b & c \end{pmatrix}$ then a and $\frac{ac-b^2}{a}$ are the pivots.

So,

$$\begin{aligned} \begin{pmatrix} a & b \\ b & c \end{pmatrix} &= LDL^T \\ &= \begin{pmatrix} 1 & 0 \\ \frac{b}{a} & 1 \end{pmatrix} \begin{pmatrix} a & 0 \\ 0 & \frac{ac-b^2}{a} \end{pmatrix} \begin{pmatrix} 1 & \frac{b}{a} \\ 0 & 1 \end{pmatrix} \\ &= \begin{pmatrix} 1 & 0 \\ 2 & 1 \end{pmatrix} \begin{pmatrix} 4 & 0 \\ 0 & 9 \end{pmatrix} \begin{pmatrix} 1 & 2 \\ 0 & 1 \end{pmatrix} \end{aligned}$$

Step-3

Here $a = 4$, $b = 8$ and $c = 25$.

Now $L = \begin{pmatrix} 1 & 0 \\ 2 & 1 \end{pmatrix}$, $D = \begin{pmatrix} 4 & 0 \\ 0 & 9 \end{pmatrix}$

Now,

$$\begin{aligned} C &= L\sqrt{D} \\ C &= \begin{pmatrix} 1 & 0 \\ 2 & 1 \end{pmatrix} \begin{pmatrix} 2 & 0 \\ 0 & 3 \end{pmatrix} \\ &= \begin{pmatrix} 2 & 0 \\ 4 & 3 \end{pmatrix} \end{aligned}$$

Thus, the matrix $C = \begin{bmatrix} 2 & 0 \\ 4 & 3 \end{bmatrix}$.

Therefore, the matrices are $A = \begin{bmatrix} 9 & 3 \\ 3 & 5 \end{bmatrix}$ and $C = \begin{bmatrix} 2 & 0 \\ 4 & 3 \end{bmatrix}$.
