

Step-1

Let A and B be two matrices. Consider that they have the same full set of Eigen vectors, such that:

Step-2

$$A = S\Lambda_1 S^{-1}$$

$$B = S\Lambda_2 S^{-1}$$

Step-3

Prove that $AB = BA$.

Step-4

Lets calculate first AB

$$\begin{aligned} AB &= (S\Lambda_1 S^{-1})(S\Lambda_2 S^{-1}) \\ &= S\Lambda_1 S^{-1} S\Lambda_2 S^{-1} \\ &= S\Lambda_1 I \Lambda_2 S^{-1} \\ &= S\Lambda_1 \Lambda_2 S^{-1} \end{aligned}$$

Diagonal matrix always gives the following result:

$$\Lambda_1 \Lambda_2 = \Lambda_2 \Lambda_1$$

Step-5

So,

$$\begin{aligned} AB &= S\Lambda_1 \Lambda_2 S^{-1} \\ &= S\Lambda_2 \Lambda_1 S^{-1} \\ &= S\Lambda_2 I \Lambda_1 S^{-1} \\ &= S\Lambda_2 S^{-1} S\Lambda_1 S^{-1} \\ &= (S\Lambda_2 S^{-1})(S\Lambda_1 S^{-1}) \end{aligned}$$

$$AB = BA$$

Step-6

Therefore, when A and B have the same full set of Eigen vectors then $\boxed{AB = BA}$.
