Find the characteristic polynomial and the minimal polynomial of the operator N in Example 8.54.

The minimal polynomial is plat= 23.

Suppose  $N \in \mathcal{L}(V)$  is nilpotent. Prove that the minimal polynomial of N is  $z^{m+1}$ , where m is the length of the longest consecutive string of 1's that appears on the line directly above the diagonal in the matrix of N with respect to any Jordan basis for N.

 $J = \begin{pmatrix} J_{1}(u) & & & \\ J_{2}(0) & & & \\ & &$

so the minimal polynomial of N is ZMH

Suppose  $N \in \mathcal{L}(V)$  is nilpotent and  $v_1, \ldots, v_n$  and  $m_1, \ldots, m_n$  are as in 8.55. Prove that  $N^{m_1}v_1, \ldots, N^{m_n}v_n$  is a basis of null N. [The exercise above implies that n, which equals dim null N, depends only on N and not on the specific Jordan basis chosen for N.]

Suppose  $p, q \in \mathcal{P}(\mathbb{C})$  are monic polynomials with the same zeros and q is a polynomial multiple of p. Prove that there exists  $T \in \mathcal{L}(C^{\deg q})$  such that the characteristic polynomial of T is q and the minimal polynomial of T is p.
